

10

circular investment opportunities for a resilient recovery

Built environment

Shaping a liveable, cost-effective, and low-carbon built environment

- 1 Renovation and upgrade of buildings
- 2 Building materials reuse and recycling infrastructure

Every **EUR 1** invested in energy-efficiency renovations can yield **EUR 5** in public finance returns.¹

Utilising recycled or reused steel for building construction could generate up to **25%** in material cost savings per tonne of steel.²

2 million energy-efficient homes
=
2 million new jobs

Retrofitting **2 million homes** for energy-efficiency could create nearly **2 million new jobs**.³

The processing of recycled aggregates compared to virgin ones could reduce GHG emissions by **40%** or more.⁴

Mobility

Shaping an interconnected, low-carbon, and resilient mobility system

- 3 Multimodal mobility infrastructure
- 4 Automotive refurbishment, remanufacturing, and repair infrastructure

Multimodal mobility systems could bring **USD 1.6 trillion** in benefits in **2030** for **China**, assuming 42% of all car kilometres were made by shared vehicles.⁵

The remanufacturing of vehicle parts can increase skilled labour requirements by up to **120%**.⁶

Multimodal mobility systems reduce **global** CO₂ emissions by **70%** or 0.4 billion tonnes of CO₂ in **2040**.⁷

The number of EVs on the road is expected to reach almost **10 million this year**, as sales grow despite the Covid-19 pandemic.⁸

Plastic packaging

Shaping a more competitive and less polluting plastic packaging industry where plastics are kept in circulation

- 5 Innovative reuse business models for plastic packaging
- 6 Plastic collection, sorting, and recycling infrastructure

Replacing just **20%** of single-use plastic packaging with reusable alternatives **globally** offers an economic opportunity worth at least **USD 10 billion**, while saving about **6 million tonnes** of material.⁹

The processing of recyclables can sustain about **20 times more** jobs than landfill, and plastic manufacturers making use of recycled materials, about **100 times more**.¹⁰

Returnable packaging market projected to grow from **USD 37 billion** in **2018** to **USD 59 billion** by **2026** (across industries).¹¹

Reducing growth in plastic production and consumption can avoid **one-third** of **global** projected plastic waste generation by **2040**.¹²

Fashion

Shaping a competitive and low-carbon fashion industry that promotes increased utilisation

- 7 Rental and resale business models for clothing
- 8 Clothing collection, sorting, and recycling infrastructure

Compared to buying new, one pre-owned purchase is said to save on average **1kg** of waste, **3,040 litres** of water, and **22kg** of CO₂.¹³

The lost value of textile waste amounting to more than **USD 100 billion** annually could be retained, by capturing and recirculating materials.¹⁴

The secondhand market is projected to reach nearly **twice the size** of fast fashion by **2029**, with resale models expected to drive the increase (growth projected at **414%** in the next five years)¹⁵

71% of customers are expressing a greater interest in circular business models, such as rental, resale, and refurbishment, as well as investing in higher quality apparel **following the pandemic**.¹⁶

Food

Shaping a resilient, healthy, and food-secure food system

- 9 Tools enabling farmers to shift to regenerative agricultural production
- 10 Food surplus and by-product collection, redistribution, and valorisation infrastructure

Spending **USD 78-116 billion** (on accelerating the adoption of regenerative annual cropping) could save **USD 2.3-3.5 trillion** in lifetime operational costs.¹⁷

USD 700 billion in environmental costs caused by the food waste created in the current system could be avoided.¹⁸

72% of Europeans have reported a greater willingness to put effort into healthier eating in the future.¹⁹

Reducing edible food surplus and increasing the composting of inedible by-products and green waste could save **1.7 billion tonnes** of CO₂ annually.²⁰
